

GOALPILOT

GOAL-BASED FINANCIAL AUTOMATION

INVESTOR BUSINESS PLAN

GoalPilot Cash

An automated, interest-earning account for planned purchases

THE INVESTMENT THESIS

- **Clear consumer job:** turn a desired purchase into a funded plan, without debt.
- **Aligned economics:** membership, deposit-program revenue, and purchase-completion revenue grow when the user saves successfully.
- **Focused launch:** one user, one goal, one customer-owned interest-bearing account, and one recurring installment plan.

August 2026

CONFIDENTIAL • INVESTOR DISCUSSION DRAFT

Prepared for investor and strategic-partner discussion

01

A purpose-built account for planned purchases

GoalPilot Cash converts intention into an automated funding plan, then keeps the money productive until the user is ready to buy.

Consumers can earmark money at a bank, automate transfers in a budgeting app, or finance a purchase after the fact. Few products combine the **purchase target, deadline, recurring installment, interest-bearing account, and completion workflow** in one experience.

GoalPilot Cash is designed as a positive alternative to credit-led consumption. The user chooses a goal, authorizes recurring ACH installments, and receives a customer-owned deposit account through a regulated partner. GoalPilot manages the plan and the experience; the partner bank and embedded-finance provider manage custody, account issuance, interest, statements, and applicable banking operations.

CORE PROMISE

Earn interest instead of paying interest.

Choose a purchase. Set the amount and deadline. Automate the installments. Withdraw when the goal is funded.

WHY THIS WEDGE IS CREDIBLE

96%

of U.S. households were banked in 2023¹

FDIC household survey

48.3%

of banked households used mobile banking as their primary access method¹

FDIC household survey

63%

of adults could cover a \$400 emergency with cash or its equivalent in 2025²

Federal Reserve SHED

The initial beta

Product boundary	Beta design	Why it matters
Account	One individually titled partner-bank account	Clear ownership and simpler reconciliation
Goal	One active purchase goal	Focused user learning and lower operational complexity
Funding	One verified external bank; standard ACH	Controlled transfers and a narrow error surface
Asset	Interest-bearing deposit only	No market loss, trading, or investment-advice boundary
Users	Maximum 50 invited U.S. adults	High-touch support and direct operational observation

Beta thesis: users will open a dedicated account, sustain recurring installments, value the interest and deadline intelligence, and pay for the automation. The 50-user beta is designed to prove or disprove those behaviors before GoalPilot expands into securities, lending, cards, or multiple goals.

02

The product is a control loop, not a savings bucket

GoalPilot manages the path to a specific purchase, while the bank partner remains authoritative for the actual deposit account.

THE SET-AND-FORGET JOURNEY

A CONSERVATIVE FUNDING EXAMPLE

Goal	Used motorcycle
Target	\$8,000
Current savings	\$1,000
Deadline	18 months
Required installment at 0%	\$388.89 / month
Recommended installment	\$390 / month

GoalPilot should not underfund a goal by assuming today's variable APY will persist. The installment is set from a conservative baseline; interest becomes a buffer that may bring the completion date forward or absorb a price increase.

Key design principle: the user chooses the outcome and constraints. GoalPilot handles the transfer schedule, progress math, and exceptions. The experience should feel automatic without becoming opaque.

AUTOMATION WITH EXPLICIT SAFETY BOUNDARIES

- Send a clear reminder before each installment; permit a skip or pause.
- Create a durable transfer command before calling the provider.
- Wait for settlement before counting money as available toward the goal.
- Post interest only from provider-reported account activity.
- Stop new contributions when the goal is funded, the account is restricted, or a return occurs.
- Never repeat an ambiguous transfer blindly; look up and reconcile the provider outcome.
- Allow withdrawals only to a verified account owned by the same user during beta.
- Provide global and account-specific transfer kill switches for operators.

The customer sees a simple goal. The operating system underneath must be precise about authorization, settlement, reversals, interest, record ownership, and reconciliation.

03

A familiar behavior with a sharper customer job

Banks have proven that consumers use labeled savings buckets. GoalPilot differentiates through deadline intelligence, automation, and purchase completion.

GoalPilot enters a broad, banked, mobile-first market. The FDIC found that 96% of U.S. households were banked in 2023 and that mobile banking was the primary access method for 48.3% of banked households.¹ The Federal Reserve reported that 94% of adults had a bank account in 2025.²

The relevant serviceable market is narrower: consumers planning a purchase of roughly \$1,000 to \$25,000 over 3 to 36 months who can fund it through predictable installments. The initial categories are electronics and hobbies, travel, vehicle down payments, furniture and appliances, weddings, and home improvement.

THE WEDGE

COMPETITIVE POSITION

Category	What it does well	Where GoalPilot extends the experience
Bank savings buckets	Free, trusted, liquid, interest-bearing	Purchase price, deadline math, adaptive installments, and completion workflow
Automated savings apps	Behavioral rules and recurring saving	Dedicated interest-bearing account plus purchase-readiness intelligence
High-yield savings	Competitive yield and simple custody	The user does not need to build and maintain the plan manually
Budgeting tools	Broad visibility into spending and accounts	GoalPilot actually holds and grows dedicated goal funds through a partner bank
BNPL and personal loans	Immediate access to the purchase	GoalPilot rewards patience and avoids financing the full purchase

WHY GOALPILOT SHOULD NOT COMPETE ON APY ALONE

- Rates are variable and can be copied or repriced by banks.
- The durable product is the combination of target, deadline, automation, accountability, and completion.
- Goal and contribution data create a product-learning flywheel without requiring the sale of identifiable financial data.
- Merchant and institutional distribution can reduce acquisition cost once the consumer behavior is proven.

Positioning: GoalPilot is not another bank with folders. It is the operating system for a planned purchase, with an account embedded inside the workflow.

04

Three aligned revenue streams, one primary economic engine

Membership should carry the business. Deposit-program and merchant revenue improve lifetime value without determining the customer recommendation.

1 Membership

\$4.99 monthly or \$49 annually

Automation, progress monitoring, one live account and one active goal.

2 Deposit-program revenue

Contractual balance economics

A disclosed interest split or separate balance incentive, subject to provider and bank agreement.

3 Purchase completion

Affiliate or referral commission

Paid by a merchant or marketplace when the user completes a goal through an approved partner.

ILLUSTRATIVE REVENUE PER ACTIVE FUNDED USER

The following is a sensitivity illustration, not a forecast. Provider pricing and commercial terms are unknown and must be obtained before launch.

Component	Illustrative assumption	Annual value
Membership	\$49 annual plan	\$49.00
Balance economics	\$2,500 average balance × 0.25% platform incentive	\$6.25
Completion revenue	25% completion rate × \$20 average commission	\$5.00
Illustrative gross revenue	Before provider, payment, fraud, support, cloud and compliance costs	\$60.25

SCALE SENSITIVITY AT THE ILLUSTRATIVE \$60.25 GROSS REVENUE

THE COMMERCIAL GO / NO-GO FORMULA

Contribution margin = membership + balance economics + completion revenue – KYC – account servicing – ACH – data – support – fraud/returns – cloud

Commercial discipline

- Do not subsidize free live accounts before provider-level variable costs are known.
- Do not rely on interest-rate spread as the primary revenue source; it compresses when rates fall.
- Keep merchant compensation separate from goal logic and clearly disclose sponsored placement.

05

GoalPilot owns the experience, not the customer deposits

The recommended structure keeps customer money at a named FDIC-insured bank and keeps GoalPilot's operating funds entirely separate.

RECOMMENDED ENTITY AND CONTRACT MODEL

Corporate recommendation

Use a single operating company, preferably a Delaware C corporation if venture financing is expected. GoalPilot, Inc. owns the product, contracts, brand and intellectual property; bills membership; and receives affiliate or program revenue. It does not place customer deposits into its operating account.

A future GoalPilot Advisory LLC or partner-RIA arrangement can be added if the company later introduces Treasury or securities portfolios. It is unnecessary for the deposit-only launch product.

Account-ownership hierarchy

- **Preferred:** individual customer-owned deposit account at the partner bank.
- **Fallback:** bank-owned FBO structure with customer-level bank records and daily reconciliation.
- **Rejected for beta:** GoalPilot-owned pooled customer-funds account or commingled operating account.

Deposit-insurance language must be exact. GoalPilot itself is not FDIC insured. Eligible deposits may be insured through the named partner bank, subject to account ownership, recordkeeping, deposit category, aggregation with the customer's other deposits at that bank, and other FDIC requirements.^{7,11}

REFERENCE PROVIDER SHORTLIST

Provider	Why it is relevant	What must be confirmed
Unit	Consumer-account focus; interest-bearing account support; interest can be shared or retained under program terms ⁴	Sponsor bank, production acceptance, pricing, account ownership, compliance allocation, minimums
Increase	Customer accounts; bank-paid interest and separate account-revenue or balance-incentive payments ⁵	Consumer-program suitability, support model, sponsor bank, economics, minimum commitment
Treasury Prime	Bank-direct embedded-finance platform and account APIs	Small-beta willingness, consumer support, interest economics, pricing, and bank selection

Provider names are reference candidates, not selections. A provider RFP and direct contract review must precede material build-out because public API documentation does not establish commercial availability, sponsor-bank approval, pricing, or responsibility allocation.

06

A lean architecture with bank-grade workflow discipline

GoalPilot's database owns the goal and automation workflow. The provider and bank remain authoritative for balances, transfers, interest, and statements.

LEAN PRODUCTION ARCHITECTURE

RECOMMENDED PLATFORM ENTITY MODEL

Entity	Purpose	Authority
User / PartnerCustomer	GoalPilot identity mapped to provider customer	GoalPilot mapping; provider identity status
Goal / GoalProjection	Target, deadline, installment, progress and forecast	GoalPilot
GoalAccount	Reference to the customer-owned partner-bank account	Bank/provider
FundingSource	Tokenized verified external bank connection	Provider and linked institution
ContributionPlan / TransferAuthorization	Cadence, amount, limits, consent and cancellation	GoalPilot evidence; provider execution
Transfer / InterestPosting / BalanceSnapshot	Installment state, posted interest and account balances	Bank/provider
ProviderEvent / ReconciliationRun	Immutable webhook intake and provider-vs-local comparison	Provider event; GoalPilot control record
ConsentRecord / AuditEvent	Terms, disclosures, authorization and security-safe history	GoalPilot

NON-NEGOTIABLE OPERATING CONTROLS

- Durable transfer record and idempotency key before provider submission.
- Signed webhook verification, deduplication, raw-event retention, and replay protection.
- Daily reconciliation of transfers, balances, interest and account status.
- No blind retry after an ambiguous provider timeout; query and reconcile first.
- Separate GoalPilot operating funds from customer deposits at all times.
- Encrypted provider credentials, strict log redaction, and operator kill switches.

07

Prove recurring behavior before scaling the financial program

The first 50 users are an operating experiment, not a growth campaign. The objective is to validate funding persistence, willingness to pay, and safe account operations.

INITIAL CUSTOMER PROFILE

- Banked, mobile-first U.S. adult.
- Planned purchase of roughly \$1,000 to \$25,000.
- Target date approximately 3 to 36 months away.
- Predictable contribution capacity and preference to avoid full-cost borrowing.
- Strong emotional attachment to a specific goal.

INITIAL GOAL CATEGORIES

Electronics and hobbies

Exact price, sale alerts, affiliate fit

Travel

Fixed date, high motivation, booking partners

Vehicle down payment

Longer funding cycle and financing comparison

Furniture and appliances

Defined merchant and purchase event

Weddings and events

Deadline and shared contribution potential

BETA COHORT DESIGN

BETA SUCCESS SCORECARD

Metric	Decision threshold	What it proves
Account-opening completion	≥ 60% of invited users	The proposition and onboarding are credible
Installment activation	≥ 70% of opened accounts	Users are willing to automate funding
Three consecutive installments	≥ 50% of activated users	Behavior persists beyond novelty
90-day funded-account retention	≥ 65%	The account remains useful
Trial-to-paid conversion	≥ 20%	Membership can support unit economics
Customer-fund discrepancies	Zero unresolved > 1 business day	Operating controls are effective
Severe security/privacy incidents	Zero	The beta remains within risk tolerance

Acquisition sequence

- Founder network and high-touch interviews to establish the first cohort.
- Goal-specific content for travel, vehicles, electronics and hobbies, rather than generic financial education.
- User referrals through privacy-safe progress cards that reveal no balance unless explicitly selected.
- Merchant and employer distribution only after GoalPilot proves recurring funding and retention.

08

De-risk the bank program before committing to scale

The critical path begins with commercial and legal validation, then proceeds through simulation, provider sandbox, production readiness, and a controlled beta.

MILESTONE ROADMAP

PRINCIPAL RISKS AND MITIGATIONS

Risk	Consequence	Mitigation
Provider will not support an early consumer program	Core product cannot launch	Run RFP before material integration work; keep provider ports and simulators
Account and transfer costs exceed membership economics	Negative gross margin	Paid account from launch; contract-level unit economics gate
Rates fall	Lower consumer yield and deposit revenue	Subscription-led economics; sell automation and completion, not APY
ACH returns, fraud or duplicate transfers	Loss, complaints and customer harm	Limits, reminders, idempotency, no blind retry, reconciliation and kill switches
Partner or middleware failure	Customer access and record risk	Customer-owned accounts, bank-level records, export rights and tested reconciliation
Free bank buckets are sufficient	Low willingness to pay	Test deadline intelligence, adaptive automation and completion value in the beta
FDIC or APY language is misleading	Regulatory and trust damage	Named-bank disclosures, legal review and Truth in Savings controls ^{9,11}

THE NEXT CAPITAL DECISION

A responsible financing target cannot be set from public documentation alone. The amount should be established after provider quotes, sponsor-bank requirements, legal scope, minimum commitments and the desired runway are known. The first investor milestone is therefore a bankable commercial package, not a speculative funding ask.

09

What must be true, and what is already supported

This plan separates sourced facts from assumptions that require contracts, counsel, or direct customer evidence.

PRIORITY DILIGENCE QUESTIONS

Workstream	Question that must be answered	Evidence required
Provider and bank	Can each beta user own an individual consumer deposit account with recurring ACH and interest?	Written proposal, sponsor-bank confirmation and sandbox access
Economics	What are KYC, account, ACH, data, statement, support and minimum-commitment costs?	Rate card and contract model
Responsibility	Who owns KYC, AML, Reg E error resolution, complaints, statements and 1099-INT?	Responsibility matrix reviewed by counsel
Ownership and insurance	How are legal ownership, bank records and deposit-insurance disclosures structured?	Account agreement and bank-approved disclosure language
Customer evidence	Will users open, fund, retain and pay for the account?	50-user beta data against the scorecard
Continuity	Can GoalPilot export data and migrate accounts if the platform or bank relationship ends?	Contractual data rights and tested exit plan

ASSUMPTIONS THAT ARE NOT YET VERIFIED

Provider acceptance, sponsor-bank selection, APY, platform revenue share, provider pricing, minimum commitments, legal responsibility allocation, customer support ownership, and live production timelines are not established by public documentation. Financial examples in this plan are illustrative and must be replaced with contractual data.
